About Vistagen

Vistagen (Nasdaq: VTGN) is a late clinical-stage biopharmaceutical company pioneering neuroscience to deliver first-in-class therapies for psychiatric and neurological disorders. Five of Vistagen's six clinical-stage product candidates belong to a new class of drugs known as pherines, which have the potential to rapidly deliver meaningful efficacy with a differentiated safety profile. Pherines are investigational neuroactive nasal sprays with innovative proposed mechanisms of action that activate chemosensory neurons in the nasal passages to impact fundamental neural circuits in the brain without the need for systemic absorption or binding to receptors in the brain. Vistagen's sixth clinical-stage product candidate, AV-101, is an investigational oral drug candidate with the potential to inhibit, but not block, NMDA receptor activity. Vistagen is passionate about transforming what is possible in the treatment of anxiety, depression, and other neuroscience disorders. Connect at www.Vistagen.com.
